

Colors and Fabrics

Exterior				Interior			

Hull:

Single skin structure. Hand laid E-glass with vinyl ester resin system.

Deck:

Hand laid E-glass with vinyl ester resin and Balsa/Nida core sandwich.

Internal structure:

E-glass, epoxy with polyurethane foam core. Additional buoyancy added.

Tubes/Fenders:

Hypalon/PVC/Cross-linked, closed cell expanded Polyethylene foam.

The M2 Sports Cats (21', 35' and 45') are Hydrofoil Supported Catamarans. Each has a revolutionary hybrid platform that comes equipped with a hydrofoil system between its semi-hulls. At speed, this patented Hysucat system carries a part of the craft's weight. It lifts the boat to reduce drag and achieve unheard of performance.

The system's efficient load carrying capability combines with the inherent stability and pleasant sea keeping properties of a planing catamaran to become an extremely economical high speed surface craft with excellent running behavior. A hybrid that truly delivers the best of both worlds. The specific design of these Cats includes an asymmetrical catamaran hull with a center-pod rounded tunnel. Specially designed and patented spray rails are incorporated into 24 degree dead rise hulls.

M2's patented Hysucat hydrofoil system is hidden underwater, has no moving parts and is virtually maintenance free. Integral to every M2 hull, the system has been tested and successfully performs daily in some of the world's harshest environments. It is in continuing, record setting service on craft ranging in length from 20 to over 200 feet. And each of these boats is part of a c-change for the better in marine performance and efficiency. When underway, hull designs of M2 Sports Cats calmly deliver a more pleasurable boating experience that's flat out fun, whether for Sport fishing or family pleasure

trips. In these boats, M2 super technology and construction know how produce an impressive array of proven real world results.

CHARACTERISTICS

Length overall	6.2m/21ft
Beam	2.40m
Power	2 x Suzuki 70Hp 4 stroke outboard
Fuel capacity	100l
Weight Approx	950kg
Top speed	40 knots approx.
Passengers Registered	7 person
Seats	CE
Certification	1200l

M2 21 Advantages

Flat out Faster. A ferocious 20-40% increase in speed over conventional cats of same size. Plus greater speed using same amount of power. Quicker Acceleration. Resulting in cost savings... Allowing use of smaller engines to keep to top speed. Lower fuel consumption. Better economy with proven fuel savings of 20 to 40%. Better ecology because of fewer emissions. Improved sea-keeping. Better performance in

rough conditions. More responsive when turning on foils. Improved banking and turning at speed. Improved ride quality. Smoother, safer, more comfortable ride. A Drier ride in chop. Reduced wake. Less wake at higher speed. Longer range. 20-40% increase in cruising range. Increased payload. More carrying capacity, foot for foot, with less speed loss. Increased hull strength. Low maintenance.
